NATIONAL REGISTER OF HISTORIC PLACES
REGISTRATION FORM

This form is for use in nominating or requesting determinations for individual properties and districts. See instructions in *How to Complete the National Register of Historic Places Registration Form* (National Register Bulletin 16A). Complete each item by marking "x" in the appropriate box or by entering the information requested. If any item does not apply to the property being documented, enter "N/A" for "not applicable." For functions, architectural classification, materials, and areas of significance, enter only categories and subcategories from the instructions. Place additional entries and narrative items on continuation sheets (NPS Form 10-900a). Use a typewriter, word processor, or computer, to complete all items.

1. Name of Property

Historic name: COLUMBIA FOREST HISTORIC DISTRICT

Other names/Site Number (VDHR File Number 000-9416)

2. Location

Street & Number: The district boundaries follow the northern property lines along 11th Street South, South Edison Street, and South Dinwiddie Street to the north, the eastern property lines along South Columbus Street to the northeast, South George Mason Street to the southeast, and the properties on the eastern side of South Frederick Street.

				not for publication	N/A
city or town	N/A	vicinity	N/A	state	Virginia
				code	VA
county	Arlington			code	013
				zip code:	22204

3. State/Federal Agency Certification

As the designated authority under the National Historic Preservation Act, as amended, I hereby certify that this X nomination request for determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60. In my opinion, the property X meets does not meet the National Register Criteria. I recommend that this property be considered significant nationally statewide X locally. (See continuation sheet for additional comments.)

Signature of certifying official _____ Date _____

State or Federal Agency or Tribal government _____

In my opinion, the property meets does not meet the National Register criteria. (See continuation sheet for additional comments.)

Signature of commenting official/Title _____ Date _____

State or Federal agency and bureau _____

4. National Park Service Certification

I, hereby certify that this property is:	Signature of the Keeper	Date of Action
<input type="checkbox"/> entered in the National Register		
<input type="checkbox"/> See continuation sheet.		
<input type="checkbox"/> determined eligible for the National Register		
<input type="checkbox"/> See continuation sheet.

Narrative Description (Describe the historic and current condition of the property on one or more continuation sheets.)

8. Statement of Significance

Applicable National Register Criteria (Mark "X" in one or more boxes for the criteria qualifying the property for National Register listing)

- | | | |
|----------|---|--|
| <u>X</u> | A | Property is associated with events that have made a significant contribution to the broad patterns of our history. |
| — | B | Property is associated with the lives of persons significant in our past. |
| <u>X</u> | C | Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction. |
| — | D | Property has yielded, or is likely to yield information important in prehistory or history. |

Criteria Considerations (Mark "X" in all the boxes that apply.)

- | | | |
|---|---|--|
| — | A | owned by a religious institution or used for religious purposes. |
| — | B | removed from its original location. |
| — | C | a birthplace or a grave. |
| — | D | a cemetery. |
| — | E | a reconstructed building, object, or structure. |
| — | F | a commemorative property. |
| — | G | less than 50 years of age or achieved significance within the past 50 years. |

Areas of Significance (Enter categories from instructions)

COMMUNITY PLANNING AND DEVELOPMENT
ARCHITECTURE

Period of Significance

1942 - 1945

Significant Dates

ARLINGTON COUNTY, VIRGINIA**

7. Description

SUMMARY DESCRIPTION

Located in the southwest corner of Arlington County, Virginia, just north of the Fairfax County line, Columbia Forest is a small residential neighborhood of 233 single-family dwellings contracted by the Federal government to house the families of young officers and ranking officials. Accessible from Columbia Pike (a major east-west route in the county) and South George Mason Drive (running from north to south), the neighborhood is located about eight miles from Washington, D.C. The district boundaries follow the northern property lines along 11th Street South, South Edison Street, and South Dinwiddie Street to the north, the eastern property lines along South Columbus Street to the northeast, South George Mason Street to the southeast, and the property on the eastern side of South Frederick Street. Curvilinear streets interspersed with cul-de-sacs wind through the hilly wooded neighborhood. Many of the mature trees found throughout the district have been in place since before the development was platted. The dwellings, each set to one side of irregular-sized lots, front close to the street and are generally surrounded by foundation plantings and shrubs. Throughout the neighborhood, the dwellings are positioned in pairs, with two houses sited close together, flanked by large side yards. Many of the streets are lined with sidewalks and very few of the lots feature driveways, therefore most residents park their cars along the streets.

Built in two phase beginning in 1942 and ending in 1945, the dwellings within the Columbia Forest district reflect the Colonial Revival style. Each dwelling is two stories in height and between two- to three-bays wide, built of masonry construction using either concrete block or bricks, and capped by either a front- or side-gabled roof. By alternating between two and three bays, concrete block and brick facing, and front- and side-gabled roofs, the builders created seven dwelling forms that were alternated throughout the development. Although the forms differed, each dwelling, as originally built, contained the same number of rooms. According to current residents, the dwellings contained two rooms on the first floor, two rooms on the second floor, one bathroom, and no basement. Less than half of the properties within the district contain one or more outbuildings such as garages and sheds. The majority of these do not date to the early 1940s, but were added over the past fifty years.

DETAILED DESCRIPTION

In 1941, the newly formed Federal governmental body, the Defense Housing Corporation (DHC), recognized the lack of suitable housing in the Washington, D.C. area caused by the influx of defense and government workers. It was the primary job of the DHC to fund and oversee the construction of housing developments throughout the country. The designed and constructed of Columbia Forest was under the direction of the Army Corps of Engineers between 1941 and 1945. This neighborhood was one of three DHC projects in Arlington County. The neighborhood, as originally developed, only contained single-family dwellings built in the Colonial Revival style. The Colonial Revival style, which borrowed heavily from early American architecture—particularly Georgian and Federal buildings—was largely an outgrowth of a nationwide pride in the past. When it first appeared, in the late nineteenth century, the Colonial Revival

ARLINGTON COUNTY, VIRGINIA**

style remained the exclusive domain of fashionable architectural firms and was favored for the large residences of wealthy clients. During the first half of the twentieth century the style spread to the suburbs and increased in popularity, resulting in Colonial Revival-style dwellings with a more modest form and detailing. The popular style was quickly embraced by developers and architects to meet the housing needs of suburban Arlington County in the middle part of the twentieth century. The adaptation of the style to the modest single-family dwellings of Columbia Forest resulted in two-story dwellings with symmetrical fenestration, decorative door surrounds, stringcourses, corner pilasters, rowlock sills, and gabled roofs.

Although all the dwellings within the neighborhood reflect the Colonial Revival style, there are a variety of forms created by altering the construction materials employed, the number of bays, and the orientation of the gable roofs. Out of the 233 primary dwellings within the district, 158 are built of concrete blocks, while the remaining 75 dwellings are of brick construction, typically laid in a six-course American-bond pattern. The majority of the brick dwellings, which predominately date from 1945, are all located in the southeastern and western portions of the neighborhood. All the dwellings flanking 12th Street South and South George Mason Drive are of brick construction. Additional brick dwellings are sited along South Edison Street southeast of its intersection with 11th Road South, and on South Columbus Street south of the intersection with South Columbus Street. All the remaining areas within the district were improved with concrete-block dwellings.

The concrete-block dwellings were built during the first phase construction, with Westbrook, Incorporated acting as the builder. These buildings exhibit three different forms defined by the number of bays and the orientation of the gable roof. The most common form within the neighborhood is the two-story, three-bay concrete-block dwelling with a side-gabled roof. Located throughout the concrete block sections of the neighborhood, it is the dominant form and was used on 103 dwellings. As originally constructed, these dwellings featured central entries set in surrounds of concrete-block pilasters and molded wood pediments. Windows with rowlock sills and large wood lintels flank the entrance and are in turn framed by raised concrete panels that are often painted to resemble shutters. The windows, without the concrete panels, are repeated in the second story. Other features include wood cornices, side-gable roofs covered with asphalt shingles, wood cornices, and an exterior-side brick chimney exists on the rear elevation. Examples of this form can be seen at 4910 10th Street South, 5172 11th Street South, and 1033 South Edison Street. Other decorative features found on some of these dwellings include brick stringcourses, as seen at 5100 11th Road South and 5004 11th Street South, and concrete-block pilasters at the corners as at 5109 11th Street South.

The second most common form of concrete-block dwellings found within the district are two stories in height and three bays wide with a front-gabled roof. Thirty-eight concrete-block dwellings are representative of this form. These dwellings, as originally built, feature off-center entrances set between raised concrete-block pilasters supporting a molded wood entablature, windows with rowlock sills and wood lintels, brick stringcourses, wood cornices, front-gabled roofs with asphalt shingles, and exterior-end brick chimneys. Examples of this form can be seen at 5118 11th Road South, 4912 11th Street South, and 1048 South Edison Street.

National Park Service**

**NATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEET**

Section 7 **Page** 3

**COLUMBIA FOREST HISTORIC DISTRICT (000-9416)
ARLINGTON COUNTY, VIRGINIA**

The final form of concrete-block dwellings located within the Columbia Forest neighborhood are two stories in height, two bays wide, and have front-gabled roofs. There are only 10 dwellings within the district representative of this form. These dwellings are similar to the three-bay, front-gabled dwellings discussed above. They feature side entrances set between raised concrete-block pilasters supporting a molded wood entablature, windows with rowlock sills and large wood lintels, brick stringcourses, wood cornices, front-gabled roofs covered with asphalt shingles, and exterior-end brick chimneys. Examples of this form are located at 5133 11th Street South, 5180 11th Street South, and 5100 12th Street South.

Although the concrete-block dwellings feature different forms, they display many of the same details. All the dwellings feature an entry surround, rowlock sills, wood lintels, and an exterior brick chimney. When constructed the concrete-block houses also contained identical windows. Paired sets of 3-light wood casement windows set beneath 2-light transoms light the first story. The second story also featured paired sets of 3-light casement windows, but not the accompanying transoms. The windows on many of the concrete-block dwellings have been replaced by wood or vinyl sash windows, but a few of the concrete-block dwellings retain their original windows. These can be seen at 4912 11th Street South, 5109 11th Street South, and 5133 11th Street South.

The brick dwellings were largely constructed during the second phase of development, which was undertaken by Jesse Johnson. These buildings comprise less than half of the district, but feature four forms instead of three. These forms, like the concrete-block dwellings, are identifiable by the number of bays and the orientation of the gable roof. The brick dwellings display the same decorative details found on the concrete-block dwellings. Out of the 75 brick dwellings within the neighborhood, 48 are two stories in height, two bays wide, and topped with side-gabled roofs. These dwellings feature stretcher-bond brick foundations, side entrances set in a wood surround with fluted pilasters and a molded entablature, double-hung wood sash windows with rowlock sills, rowlock stringcourses, wood cornices, front gable roofs with asphalt shingles, and exterior-end brick chimneys. Some of these dwellings also feature brick pilasters at the corners. A few examples of this form include 5004 12th Street South, 1837 South George Mason Drive, and 1909 South George Mason Drive.

The two-story, three-bay brick dwellings with side-gabled roofs are the second most common brick dwelling form within the district represented by just three buildings in total. These dwellings are almost identical to the two-story, three-bay concrete block form. They feature a central entrance set between brick pilasters supporting either a molded wood pediment or a brick entablature, double-hung wood sash windows with rowlock sills, brick stringcourses, wood cornices, side-gabled roofs covered with asphalt shingles, and an exterior-side brick chimney. A few of these dwellings also feature brick pilasters. Examples of this form can be seen at 5009 12th Street South and 5017 12th Street South.

Within the district, there are 24 front-gabled brick dwellings; 22 of which measure two bays wide, while the remaining two dwellings are three bays wide. The forms, although differing in number of bays, feature the same decorative detailing. Both forms have side entries, paired or single double-hung wood sash windows set above rowlock sills, brick stringcourses, wood cornices, front gable roofs covered with asphalt shingles, and exterior-side brick chimneys. These forms generally do not have entrances highlighted by Colonial Revival-style surrounds. Examples of front-gabled, two-

ARLINGTON COUNTY, VIRGINIA**

bay dwellings are located at 5000 12th Street South, 5029 12th Street South, and 5044 12th Street South. Three-bay forms with front-gabled roofs can be seen at 5013 12th Street South and 1124 South Edison Street.

Only 90 secondary resources such as a garage or shed were noted in Columbia Forest. Of these outbuildings, only fourteen appear to date from the period between 1942 and 1945. The majority of the contributing secondary resources are garages, eleven in total, while there are only three 1942-1945 sheds. In general, the contributing garages are one story in height and one bay wide with front-gabled roofs covered with asphalt shingles. The majority of them are of wood-frame construction and clad in weatherboards, pressed vertical boards, aluminum siding, or vinyl siding. The contributing sheds closely resemble the garages and are one story in height and one bay wide with front-gabled roofs covered with asphalt shingles.

Development After 1945

By 1945, the Columbia Forest development was complete with single-family dwellings positioned on every lot. During the second half of the twentieth century, the Columbia Forest neighborhood was expanded to the north, east, and west. These areas, which were improved by single-family dwellings, apartment buildings, and late-twentieth-century townhouses, were not part of the original subdivision and are, therefore, not included in the historic district. Additional outbuildings were constructed on about 67 properties during the second half of the twentieth century. These non-contributing resources are generally garages or sheds between one to two bays in width and one story in height. These buildings are generally wood-frame or pre-fabricated metal and clad in vinyl or aluminum siding. Other noted outbuildings include carports, gazebos, and guesthouses.

Within the Columbia Forest district itself, very little changes have been made since 1945. The limited number of rooms within the dwellings have caused some owners to build unimposing additions to the rear of the dwellings. These additions generally have little impact on the integrity of the dwelling as they are often not visible from the street and do not disturb the original form and fenestration of the historic dwelling. Other alterations include covering the concrete-block walls with cladding materials such as formstone, aluminum siding, and vinyl siding, and replacing the original wood sash windows with vinyl sash windows. Despite the alterations and minor additions that have occurred within Columbia Forest, the majority of the features that illustrate the building's original style in terms of massing, spatial relationship, proportion, fenestration, texture of materials, and ornamentation are largely intact. The setback, massing, scale, and overall feeling of Columbia Forest as a government-motivated suburban neighborhood are significantly intact.

This Colonial Revival style dwelling is two stories in height and two bays wide. It has a solid stretcher-bond brick foundation supporting a masonry structural system with bricks laid in a 6-course American bond pattern and decorated with a rowlock belt course. The facade (west elevation) features a side entry positioned next to one set of paired double-hung wood sash 6/6-light windows with a rowlock sill. These windows are repeated on the second story and feature continuous rowlock sills and lintels. The dwelling has a wood cornice and a front gable roof, which is covered with asphalt shingles. One exterior-side brick chimney with a corbeled cap exists on the north elevation. A one-story, one-bay portico with a front gable roof supported by square wood posts shades the entrance.

Primary Resource Information: **Single Dwelling, Stories 2.00, Style: Other, 1942**

This dwelling was originally constructed in the Colonial Revival style but has undergone large-scale additions and alterations. The dwelling is currently two stories in height and three bays wide. It has a solid concrete block foundation and a concrete block structural system, both of which are clad in a brick veneer. The facade (northeast elevation) features a side entry set in a brick clad concrete block surround with a soldier-course lintel and double-hung vinyl sash 1/1-light windows positioned singly and in pairs. The first story contains one canted bay window with a 1-light fixed vinyl sash window flanked by double-hung vinyl sash 1/1-light windows. The second story contains one set of sliding glass doors. All the windows have rowlock sills. A basement level Garage is situated in the northwestern bay. The dwelling has an aluminum clad cornice and a asymmetrical front gable and Shed roof covered with asphalt shingles.

This Colonial Revival style dwelling is two stories in height and two bays wide. It has a solid stretcher-bond brick foundation supporting a masonry structural system with bricks laid in a 6-course American bond pattern. The facade (south elevation) features a side entry positioned next to one set of paired double-hung wood sash 6/6-light windows with a rowlock sill. These windows are individually repeated in the upper story where they feature continuous rowlock sills and lintels. One round wood louvered vent is centered in the gable peak. The dwelling has an aluminum clad cornice and a front gable roof, which is covered with asphalt shingles. One exterior-side stretcher-bond brick chimney exists on the west elevation. A one-story, one-bay portico with a front gable roof supported by square wood posts shades the entrance.

This Colonial Revival style dwelling was originally two stories in height and three bays wide but now measures five bays wide. The original dwelling has a concrete block foundation supporting a concrete block structural system clad in a formstone veneer with pilasters at the corners. The central entry of the original dwelling is marked by a projecting lintel. A set of paired 3-light metal casement windows with a 2-light transom has been inserted in the original door opening. This window matches the rest of the first story windows and has a stone sill. The upper story is lit by paired sets of 3-light metal casement windows. The original dwelling has a side gable roof, which is covered with asphalt shingles. One exterior-side brick chimney with a corbeled cap exists on the southeast elevation. A large two-story, two-bay addition is attached to the northeast elevation. This addition is clad in formstone and features windows matching those found in the original dwelling. The windows have stone sills and keystone lintels. The addition has two gabled wall dormers and a side gable roof. One exterior-end brick chimney with a corbeled cap is attached to the northeast elevation.

This Colonial Revival style dwelling is two stories in height and three bays wide. It has a solid concrete block foundation supporting a concrete block structural system decorated with a rowlock stringcourse. The facade (northwest elevation) features a side passage entry set in a raised concrete block surround with a molded wood lintel and 3-light metal casement windows with rowlock sills and wood lintels. The window on the first story features a 2-light metal transom and the windows on the second story have continuous rowlock sills. The dwelling has a molded wood cornice and a front gable roof, which is covered with asphalt shingles. A wood-frame addition clad in aluminum siding, built circa 1980, is attached to the northwest, southwest and southeast elevations. This addition features fixed 1-light vinyl sash windows on the facade. Although the addition reduces the integrity of the dwelling, the original building remains intact and is easily apparent from the exterior. The dwelling is also one of the few buildings within the district that retains the original windows.

STATEMENT OF SIGNIFICANCE

Located in southwest Arlington County, Columbia Forest is a residential neighborhood significant as one of only twenty-six housing projects built within the United States by the Defense Homes Corporation (DHC) between 1940 and 1945 and one of only three built in the Washington, D.C. area. The large number of people flocking to the Washington, D.C. area during the first half of the 1940s created a severe housing shortage in the city and surrounding area. Private industry was unable to meet the demand and tended to build dwellings that many government employees could not afford. It was the responsibility of the DHC to build housing that could be rented to defense employees. The DHC often met with resistance, as many of the housing projects it funded were not designed to become a lasting part of the community; however, Columbia Forest was designed by the DHC to be a permanent part of the community. Directed by the Army Corps of Engineers between 1942 and 1945, the hilly wooded neighborhood is defined by concrete-block and brick detached single-family dwellings. Upon completion the modest dwellings were rented to young officers and ranking officials with families. At the end of World War II, the DHC was disbanded and the dwellings of Columbia Forest were sold to the public with a preference given to war veterans.

The district meets National Register criteria A and C, and is significant under the themes of community planning/development and architecture with the period of significance dating to 1942-1945. The neighborhood consists of 233 properties including 234 single dwellings and 90 secondary resources. In all, there are 238 contributing resources and 85 non-contributing resources within the district.

Criterion A: That are associated with events that have made a significant contribution to the broad patterns of our history.

Columbia Forest meets Criterion A of the National Register of Historic Places as a planned community developed by the federal government to house military personnel and their families. In 1941, the United States government was preparing for the possibility of entering the war raging through Europe. The military, War Department, and numerous other governmental offices began employing large numbers of civilians, as well as enrolled men, to work what was termed as defensive positions. This influx of workers to the Washington, D.C. area created severe housing shortages in the surrounding suburbs, including Arlington County. In 1941, the Defense Homes Corporation (DHC) was formed to create and fund affordable housing for the defensive workers. Columbia Forest is one of the three DHC planned and funded projects in the Washington, D.C. area. Under the direction of the Army Corps of Engineers between 1942 and 1945, the two-story dwellings were rented to young married officers who worked at the nearby Pentagon or commuted to government jobs in Washington, D.C.

Criterion C: That embody the distinctive characteristics of a type, period, or method of construction or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction.

The Columbia Forest district meets Criterion C for its substantial number of concrete-block and brick single-family dwellings, which were built under the direction of the United States government between 1942 and 1945. In 1941, the

newly formed government body, the Defense Housing Corporation (DHC), recognized the lack of suitable housing in the Washington, D.C. area caused by the influx of defense and government workers. It was the primary job of the DHC to fund and oversee the construction of housing developments. Westbrook, Incorporated and Jesse Johnson were contracted by the Army Corps of Engineers to construct Columbia Forest in two phases between 1942 and 1945. The neighborhood, as originally developed, only contained single-family dwellings built in the Colonial Revival style. Each dwelling is two stories in height and between two to three bays wide, built of masonry construction using either concrete blocks or bricks, and capped by either a front- or side-gabled roof. By alternating between two and three bays, concrete block and brick faced, and front- and side-gabled roofs, the builders created seven Colonial Revival-style dwelling forms that were alternated throughout the development. Although the forms differed, each dwelling, as originally built, contained the same number of rooms. According to current residents, the dwellings contained two rooms on the first floor, two rooms on the second floor, one bathroom, and no basement.

HISTORIC BACKGROUND

Arlington County

Arlington County, with its commuter trains to and from the nation's capital, began to grow at an unprecedented pace by the turn of the twentieth century. Between 1870 and 1900, the population more than doubled rising from 3,185 residents to 6,430.¹ This development was further spurred by U.S. involvement in World War I (1917-1918). The war stimulated a widespread growth in all the government offices, which in turn drew employees from all over the country to the Washington, D.C. area. This population was further increased by the workers needed to run services catering to government employees.² The large influx of workers created a shortage of housing in Washington, D.C. and people began to look to the commuting suburbs. Arlington County, with its commuter trains, was an ideal location for developments to house these workers. Between 1910 and 1920, the population of Arlington County increased by 60%, despite losing the previously included populous town of Alexandria.³

During the 1920s, Arlington County continued to grow at a steady pace, with the population increasing by 40% within that decade.⁴ Owing to the confusion between the City of Alexandria and the County of Alexandria, the Virginia General Assembly voted in 1920 to change the name of Alexandria County to Arlington County. The newly formed Arlington County government embarked on a number of countywide improvement projects. In 1923, construction began on the first sewage system, and by 1930, the whole of the county had been designated as a single sanitary district. By 1927, the construction of a county water system was underway.⁵

The 1930s witnessed a countywide improvement in transportation. By the early 1930s, buses transported county residents to and from Washington, D.C. and had replaced most of the railroads.⁶ The importance of the automobile increased during the 1930s, and new routes between Arlington County and the nation's capital began appearing. Memorial Bridge was constructed in 1932, and soon after the George Washington Memorial Parkway was expanded and major thoroughfares were constructed throughout the county.⁷

During the 1930s, the country fell into a nationwide economic depression. In order to provide a boost to the economy as well as employment opportunities for civilians, the government enacted a series of programs. President Franklin Roosevelt's New Deal programs more than doubled the number of civilian jobs within the government between 1930 and 1940. The Works Projects Administration, launched in 1935, created an enormous demand for professional and white-collar workers in Washington, D.C., while the Public Works Administration needed a large number of construction and blue-collar workers.⁸ The promise of work brought thousands to the Washington, D.C. area and Arlington County, with its new graceful subdivisions, public water and sewer, and easy commute to and from Washington, D.C., made it an attractive alternative to living in the city. The population of Arlington County more than doubled between 1930 and 1940, with 43% of the total population working for the United States government. The new population of Arlington in 1940 was young, 85% of the residents were under fifty years of age, and educated with 20% holding college degrees.⁹ By 1940, the increasing population caused the county's sewage system to become obsolete and local officials began asking Congress to help pay for the upkeep of the system.¹⁰ However this did not deter people from settling in the fast-growing county.

In 1940, Americans began preparing themselves for the possibility of attack from Germany, Italy or Japan. At the beginning of 1940, Arlington citizens organized the "Committee to Defend America by Aiding the Allies" and requested the County Board to assist in obtaining a rifle and pistol range where county citizens could train for defense. Later that year, the Commonwealth started to organize the Virginia Protective Force, militia units based throughout the state to guard bridges, public utilities, and transportation routes. Sixty men were assigned to guard sites in the Arlington area. At the beginning of 1941, the Arlington Civic Federation urged the governor of Virginia to appoint a Defense Council for Arlington County, which was done one month later in February. By June of 1941, a civilian defense registration plan was created to determine individual's skills and abilities in case of an emergency.¹¹

Civilians were not alone in their fear of an attack on U.S. soil. The federal government and military were also preparing for the possibility of war. By the summer of 1941, the Army had grown from 270,000 men in 1940 to 1.4 million, the War Department had expanded to 24,000 employees, and the number of civilian employees in the army had grown from 7,000 to 41,000. The growing War Department employees had offices housed in over 23 buildings in Washington, D.C., Virginia, and Maryland.¹² The lack of space lead to plans to build the Pentagon, a colossal building to house the military

offices and all the employed enlisted and civilian men. In preparation for a war, the government and military were growing at an alarming pace and showed little sign of slowing down. Even before the bombs were dropped on Pearl Harbor, the housing shortage in Washington, D.C. and Arlington was reaching a critical level.¹³

The Defense Homes Corporation

By 1940, Europe was entrenched in World War II and the American government had begun preparing for a possible war. Throughout the year, Congress allocated funds to support military and domestic defense projects, thus creating numerous jobs for both military personnel and civilians. Many of the government agencies created to aid private business during the Depression changed aims and began to finance war preparations. The Reconstruction Finance Corporation (RFC), a government agency created in 1932 under the Herbert Hoover administration, was originally created to facilitate economic activity by lending money. By the end of the 1930s, the RFC's primary function was to finance the construction and operation of war plants, and to provide loans to foreign governments.¹⁴

As previously noted, the Washington area was facing a housing shortage created by the influx of government and defensive workers. In 1940, the RFC was given the power to create corporations without the specific authorization of Congress.¹⁵ On October 23, 1940, the RFC established the Defense Homes Corporation (DHC) to abate the developing housing shortage faced by government-employed defense workers. DHC was later transferred to the National Housing Authority (NHA) upon its establishment by President Franklin Roosevelt in February of 1942. In order to consolidate housing efforts, the NHA organized sixteen existing federal housing organizations into three main units: The Federal Housing Administration (FHA), the Federal Home Loan Bank Administration, and the Federal Public Housing Authority (FPHA).¹⁶ One of the responsibilities of the FPHA, under which DHC functioned, was to furnish "housing for war workers in localities where impeding or existing shortages would impede war activities".¹⁷ Between 1940 and 1945, the Defense Homes Corporation built a total of twenty-six housing projects before being liquidated.¹⁸ Of those twenty-six projects, five were dormitory buildings and twenty-one were built to house families. Those housing families were either apartment building complexes, or developments of individual single dwellings.

Community Planning and Government Housing

In Arlington County, as well as other parts of the country, private enterprise could not keep up with the demand for housing due to lack of construction materials and perceived financial risks.¹⁹ The need for new housing to accommodate defensive workers was acknowledged by most Americans, however there was a concern regarding how the government-sponsored housing would affect the community at the war's end. In the November 1940 edition of *Architectural Record*, New York architect Percival Goodman argued that it was of "vital importance to the general welfare of America that the

buildings constructed under the defense program be considered not as temporary but as permanent additions to our lives” in order to guarantee “maximum social and economic value for the money and effort to be expended for defense-program architecture.”²⁰ The following year, Dorothy Rosenman, head of the National Committee on the Housing Emergency, argued that communities needed better planning guidelines in order to avoid a future slum problem.²¹

Luckily, Arlington County was one of the few counties with planning guidelines already in place. Local government control of the development of Arlington County began on June 9, 1914, when the Arlington County Board of Supervisors adopted a subdivision control ordinance requiring developers to receive approval for subdivision plans from the county engineer. This was done in order to ensure a coordinated layout of streets and sewers. Over a decade later, in 1927, the General Assembly passed legislation permitting counties to adopt zoning ordinances. The Board of Supervisors for Arlington County appointed a zoning commission that held its first meeting on July 11, 1927. Allen J. Saville was contracted to provide the commission with the technical advice necessary to create a plan to guide land use. He submitted his plan to the Board of Supervisors on February 14, 1930, and it was adopted on April 29, 1930. This plan denoted certain types of development within the entire county. The large-scale growth of subdivisions in Arlington County during the 1930s lead to the creation of a planning commission, an advisory body created in 1937. The following year planning was officially recognized as a function of government by the creation of a planning division under the Office of the County Engineer. This division created guidelines and rules that restricted and controlled the housing built within Arlington County.

With the influx of government workers throughout the 1930s and continuing into the 1940s, the resulting wide-spread housing development was causing problems within the county. This was exacerbated by the fear that the government-financed housing would be of poor quality. This lead to the conclusion that a more restrictive county plan was needed. In a July 1941 editorial printed in the local paper *The Sun*, the need for further development control was discussed:

“Nothing will hold down the county’s general level of housing standards more securely than to permit unrestricted construction of apartments, big or little, under the pressure of a boom housing market... Our apprehension, and that of certain Board members, at what will happen to Arlington if some drastic and effective restriction isn’t placed on apartments is not, apparently merely a local fear.... Unrestricted apartments are felt to be just as injurious to the welfare of...[Montgomery] County [Maryland] as we feel they are to Arlington.”²²

The call for a restriction on the number of apartment buildings constructed within Arlington County was answered by the Master Zoning Plan of 1942. The plan reduced the number of blanket apartment zones and created “population density districts, varying from high density districts in apartment zones to low density districts in high residential areas.”²³ It also required off-street parking in apartment and housing projects, set minimum land area standards for various forms of

residential land use, and prohibited rowhouse construction.²⁴

Development of Columbia Forest

Under the 1930 Zoning Ordinance, written by Allen J. Saville, the land that would become Columbia Forest was designated as "A" Residential, and thereby allowed only single-family detached houses to be built on the property.²⁵ Although the original 1930 zoning of many areas within Arlington County was altered by 1940, the DHC decided to construct only single-family detached dwellings on the land. This may have been due to public outcry during the early 1940s against government-funded apartment complexes, or due to the 1942 Master Zoning Ordinance that restricted the number of apartment complexes and prohibited rowhouses within the county.

Due to the housing shortage created by the influx of defense workers in 1941, the DHC needed to develop areas around the nation's capital. The wooded land upon which Columbia Forest was to be built was chosen as a site suitable for single-family dwellings to house young married officers and governmental officials. The site was close to transportation routes and it was an easy commute to the site of the planned war department offices. The DHC contracted the Army Corps of Engineers to design the neighborhood and supervise the construction of the dwellings. The Army Corps of Engineers attempted to conform the street layout to the existing geography of the area and to preserve as many of the existing trees as possible. Shortages caused by the war meant there was a shortage of traditional building materials and so cheap concrete block was used on the majority of the buildings within Columbia Forest. Westbrook, Incorporated was contracted in 1942 to erect the first phase of Columbia Forest, which consisted primarily of concrete-block dwellings. In total, Westbrook, Incorporated was responsible for the construction of 177 concrete-block and brick dwellings in Columbia Forest. The second phase of development was undertaken by builder Jesse Johnson in 1945 and included fifty-six brick dwellings. By 1945, the neighborhood was complete and the DHC had leased the dwellings exclusively to the families of young officers and government officials. The solidly built dwellings were intended to become a permanent part of the community, not to be demolished at the end of the war. The trees covering much of the land chosen for Columbia Forest were preserved in order to make the neighborhood appear older. The decision to create a permanent, mature neighborhood may have been in response to earlier public criticisms of government-financed housing.²⁶

Although the effort was made to create a neighborhood that appeared to be well established, the overall design of Columbia Forest was lacking in some areas. In March of 1943, less than one year after the first phase of development was completed, county officials had to evict families from a section of Columbia Forest. According to a local newspaper, the *Evening Star*, the families were living without sewer service on a street pocketed with holes over six feet deep.²⁷ Although this problem was soon fixed, other issues plagued the residents of Columbia Forest for a much longer period of time. As originally developed, Columbia Forest provided residents limited access to Columbia Pike from South Frederick Street, and no access to nearby Route 7. South George Mason Drive stopped at Four Mile Run and the nearby streams

overflowed their banks and ran through the neighborhood after heavy rains.²⁸ It was not until 1974 that many of these problems were addressed with the construction of a bridge over Four Mile Run connecting South George Mason Drive to the rest of the county. At the same time, South George Mason Drive was extended to Route 7 in Fairfax County and additional access was given to Columbia Pike from South Columbus Street.²⁹

At the end of World War II, the government no longer had any need for the single-family dwellings in Columbia Forest. Individual houses within the development were sold to the public, with preference given to war veterans. The cost of a house and lot in Columbia Forest averaged about \$4,200.³⁰ All the surviving DHC projects met a similar fate and the organization was disbanded at the end of the war.

Development After 1945

By 1945, the Columbia Forest government-encouraged development was complete. In 1947, the original neighborhood was enlarged by the platting of Virginia Heights, a subdivision of single-family dwellings, including a handful of the county's few surviving Lustron houses built in 1948. Multiple-family dwellings and commercial buildings improved areas along Columbia Pike throughout the second half of the twentieth century. Virginia Heights is now considered a part of Columbia Forest but is not included in the district since it was not part of the original development funded and designed by the DHC and Army Corps of Engineers.

Geographical Data

Verbal Boundary Description

Columbia Forest is located in the southwest corner of Arlington County, Virginia. The district is bounded by the northern property lines along 11th Street South, South Edison Street, and South Dinwiddie Street to the north, the eastern property lines along South Columbus Street to the northeast, South George Mason Street to the southeast, and the properties fronting on the east side of South Frederick Street. Columbia Pike, lying directly to the north of the district, is a major east-west route within the county and is a direct link between the Columbia Forest district and the Pentagon, where many of the first inhabitants were employed. South George Mason Drive, the southeastern boundary of the district, crosses a large portion of the county from north to south.

Boundary Justification

The Columbia Forest district boundaries follow the perimeters of the Columbia Forest neighborhood as originally designed by the Army Corps of Engineers and built by Westbrook, Incorporated and Jesse Johnson in 1942 and 1945.
